Lightweight, a little loud, but really throws a huge volume of air! It's much better performance than the leaf vac/blower combo I replaced. Plus the blower tube stays on the blower, my old one would always fall off.

I bought this blower in Sept 2011 and got 3 solid summers out of it with no issues at all. 4th summer was a different story, as I started to experience stalling issues. It would start back up then stall again. I looked at the fuel lines and found the black tube was starting to perforate right where it connects to the carb; and the pink / clear looking line from the primer bulb was disintegrating inside the plastic fuel tank. Looks like ethanol in the fuel was eating away at these parts.

Human analysis

Blower (subject)

- Lightweight → +
- Little Loud → -
- Throws huhe volume of air → +
- Tube stays on the blower → +
- No issues at all → +
- Experience stalling issues → -
- Black tube starting to perforate → -
